

Enhancing Climate Risk Management in Kenya ,Case of NDMA

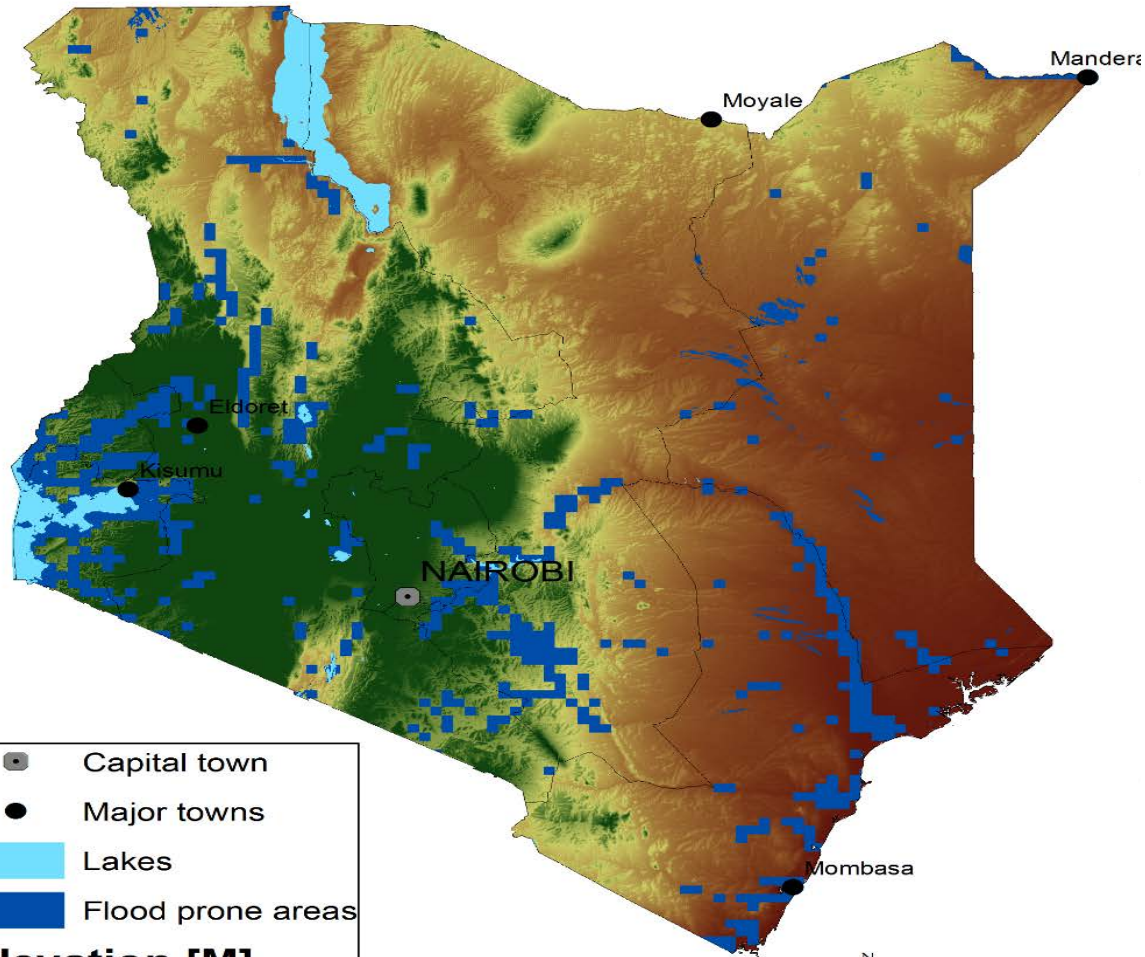

Paul Kimeu

National Drought Management Authority.

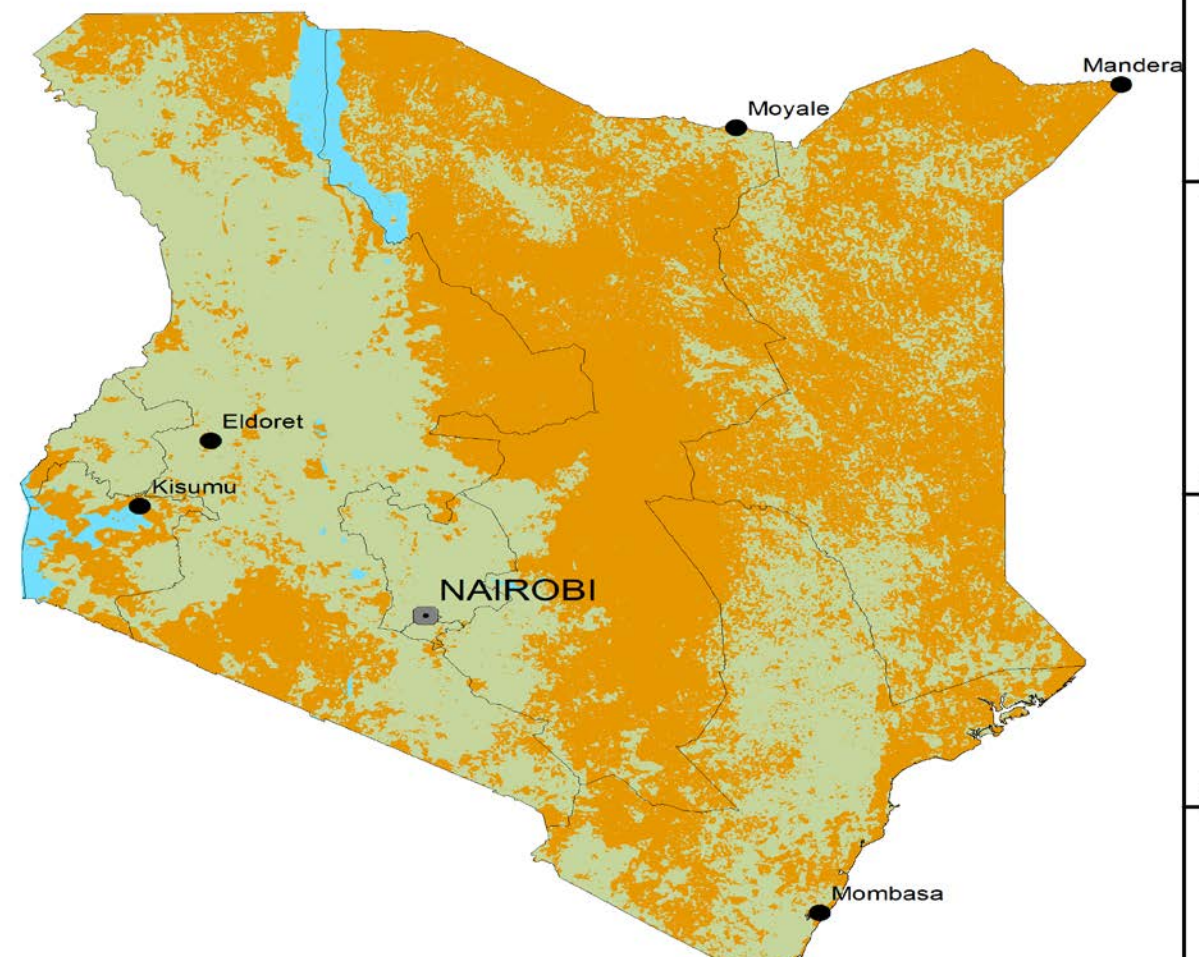

Common Hazards in Kenya

	Drought		Epidemic
	Floods/ Landslides		Terrorism
	Conflict/Civil Unrest		Hazardous Materials
	Major Accidents		Arson/Fire
	Structural Collapse	Emerging Disasters/hazards	Drug and substance abuse, Electronic waste disposal

Floods

Drought

Overgrazing/wind erosion

Aridity/erosion

Invaders Prosopis

Drought.

- ❖ Drought is the major hazard in Kenya and the biggest threat to humanity and livelihoods in the entire Great Horn Africa.
- ❖ Over 85% of the Country's land mass is prone to risks related to Drought and poses great danger to lives and livelihoods.
- ❖ PDNA report for the 2008-2011 drought placed total damage and losses to USD 12.1Billion and was estimated to have slowed GDP by an average of 2.8% during that period.
- ❖ Better management of drought is therefore envisaged to be critical to national development and the achievement of Kenya Vision 2030 Development Strategic goals.

- ❖ Thus the government committed itself to eliminate emergencies related to drought by 2022
- ❖ Therefore, need to institutionalize the strategy through setting up of NDMA to oversee the implementation of the strategy.

NDMA Geographical coverage

A national institution, focusing on 23 of Kenya's 47 counties which:

- Are either arid or semi-arid
- Account for 36% of the population
- Host 70% of the national livestock herd
- Cover 85% of the land
- Generate 90% of the revenue from tourism

NDMA Vision and Mission

Vision: To be a world-class authority in drought management and **climate change adaptation** for sustainable livelihoods

Mission: To provide coordination and leadership of Kenya's efforts in the management of drought risks and **enhancing adaptation to climate change.**

Initiatives.

- Social Safetynet- HSNP, Resilience through Asset Creation-
- Resilience Projects-Call for Proposals, WFP/GOK/CGs/UN
- EWS
- Drought Contingency plans-Fund
- Partnerships
- ADA Consortium—
